SUMMARY

Junior Full-Stack Developer (**Node.js, React, TypeScript**, NestJS, PostgreSQL) with a BSc in Software Engineering (NaUKMA, 2026, GPA 91.36/100). Built and deployed a multi-tenant hiring platform over 6 months, mentored by a senior engineer, owning it end to end: database, API, React frontend, deployment and **499 integration tests** in GitHub Actions CI. Open-source contributor: a bug fix merged into NestJS's Swagger/OpenAPI module.

SKILLS

Frontend: JavaScript, TypeScript, React 19, Redux Toolkit, RTK Query, TanStack Query, Zustand, React Router, Zod, MUI, Tailwind CSS, HTML, CSS, Vite

Backend: Node.js, NestJS, Express, REST APIs, PostgreSQL, MongoDB, MySQL, SQLite, TypeORM, Prisma, JWT auth (access + refresh tokens), guards, rate limiting, bcrypt, Swagger/OpenAPI

Testing / DevOps: GitHub Actions CI, Jest, Mocha/Chai/Sinon (unit + integration tests on real PostgreSQL), Docker Compose, Vercel, Render, Supabase

Tools: Git, AI-assisted development (Claude), Agile/Scrum, Figma

Languages: Ukrainian (native), English (C1)

PROJECTS & OPEN SOURCE

Open Source: nestjs/swagger

Oct 2026

Contributor, merged PR #4169

github.com/nestjs/swagger/pull/4169

- Fixed a regression where one endpoint's @ApiConsumes / @ApiProduces leaked into every endpoint documented after it, so the generated OpenAPI spec showed the wrong media types. Traced it to a merge helper that mutated the controller's own metadata array; the fix merges into a fresh array.
- Added regression tests that fail on master and pass with the fix; unit and e2e suites green. Merged by the maintainer without change requests.

Hiring Optimization & Automation Platform

Nov 2025 - Jun 2026

Bachelor's thesis, mentored by a senior engineer

github.com/kkatalz/hiring-optimization-and-automation-platform | Live: hiring-optimization-and-automatizat.vercel.app

- Designed, built and deployed a multi-tenant applicant tracking system end to end, from database schema to production (Vercel + Render + Supabase).
- Kept server state (RTK Query, tag-based cache invalidation) separate from client state (Redux Toolkit) in the React frontend, with auth and role-based route guards.
- Isolated tenant data: every query is scoped to the caller's company, and requests for another company's data return 403. Enforced 5 access levels with a global roles guard and service-layer ownership checks.
- Wrote **499 integration tests in 14 suites** against a real PostgreSQL container, run on every push by GitHub Actions.

Music School Management System

Oct 2025 - Dec 2025

Backend developer, team of 3

github.com/kkatalz/music-school | Live: music-school-eight-vert.vercel.app

- Led the backend in a team of 3: wrote most of it (**59 of 108 backend commits**) and was the top contributor across the whole repository.
- Built a REST API for 3 roles (student, teacher, head teacher) covering enrolment, subjects and grades, with JWT authentication and role guards.

EDUCATION & CERTIFICATIONS

BSc Software Engineering National University of Kyiv-Mohyla Academy (NaUKMA) 2022-2026

GPA: **91.36/100** | Thesis: Hiring Optimization & Automation Platform

Certificate: Frontend and JavaScript Program, Intermediate (90 hours) EPAM University Program Sep 2023 - Dec 2023

VOLUNTEER EXPERIENCE

English Speaking Buddy (volunteer), ENGin | Remote

Jul 2024 - Mar 2026

- Ran **59** weekly one-on-one English conversation sessions (**67.5 volunteer hours**) with two learners.
